FACENTRY

CONTACTLESS ACCESS CONTROL

CONSTRUCTION

A CONTACTLESS CONSTRUCTION INDUSTRY

The construction industry suffered significantly during the **COVID19 pandemic**, with many sites having to stop using contact-based access authentication such as **PIN key-codes** or **fingerprints**. **All of the existing access methods are flawed.**

PIN access provides little security as codes are rarely changed, and can easily be passed on to unauthorised persons. They are a **disease transmission point** and provide no record of who is on site.

Fingerprint access is **inconvenient** (as the biometric data must be collected in person, i.e. on site) and is a disease transmission point.

Cards and fobs can be l**ost, stolen or simply forgotten**. There can be availability issues and they are open to abuse. Discarded fobs and cards also represent an environmental problem.

At **TouchByte** we specialise in **contactless access control**. We developed **Facentry,** which overcomes all of these problems.

Facentry is **contactless, weather resistant, robust,** and can be used as more than just hands-free access control.

Let us explain a little more in this eBook. You'll be clued up on innovative, **contactless facial authentication** in no time.

HOW DOES OUR TECHNOLOGY WORK FOR YOUR BUSINESS?

Facentry works by recognising users who have been programmed into the system. Workers will upload a selfie, which is verified by our software. This is then used to grant access on site. It's as simple as that.

CONVENIENCE. Get your workforce onto site quickly, saving them time and you money. No need to put tools down as they enter.

SAFETY. It's contactless, eliminating a disease transmission point. A real-time record of who's on site for emergency roll-calls.

SECURITY. Helps keep intruders out, reducing H&S risk and thefts.

EFFICIENCY. Simple enrolment on or off-site using a selfie, which means contractors arrive on day-one, ready to go.

VISIBILITY. Reports from our **FaceOS Dashboard** allow you to track site activity.

CONTROL. The quick, simple deletion of users prevents unauthorised access by former staff.

WHY FACENTRY?

**SOLUTIONS.** Our system can be tailored to your organisation's precise requirements.

PARTNERS. We can work with you and your sub-contractors to provide all the support you need.

BRITISH. Facentry was designed and developed in the UK, and is built and supported here.

ETHICAL. We will always safeguard the data security of your workforce and your business.

FLEXIBLE. We have a variety of commercial models to suit your business and project needs.

RELIABLE. We aim to build long term business relationships with our customers.

DESIGN

SIMPLE. The FaceOS Dashboard is simple and easy to use; making enrolment and management of users very straightforward.

BRANDABLE. The system is completely customisable with your corporate colours, brand and logo.

FLEXIBLE. Facentry can be integrated with all access gate types.

ADAPTABLE. The system can be integrated with your workforce management software for payroll, qualifications or HR.

PORTABLE. Facentry can readily be moved from site to site.

DURABLE. The Facentry UCMeC has been specifically designed for a harsh, outdoor environment.

GOT A QUESTION?

We'd love to chat about your business requirements, and ways in which we can cater to your needs.

Feel free to give us a ring, or drop us an email.
