# Meet FaceOS

## What is FaceOS?

It's a smart dashboard that works hand in hand with our Facency system. FaceOS is a centralised system, suitable for multiple sites.

It's a digital space for every face.

Enrol new visitors or members of staff into your space. This could be new recruits, recurring visitors, one-off attendees, members, or whoever you please.

They don't need to be present to be enrolled; this can be done remotely via a shareable link.

# How does it work?

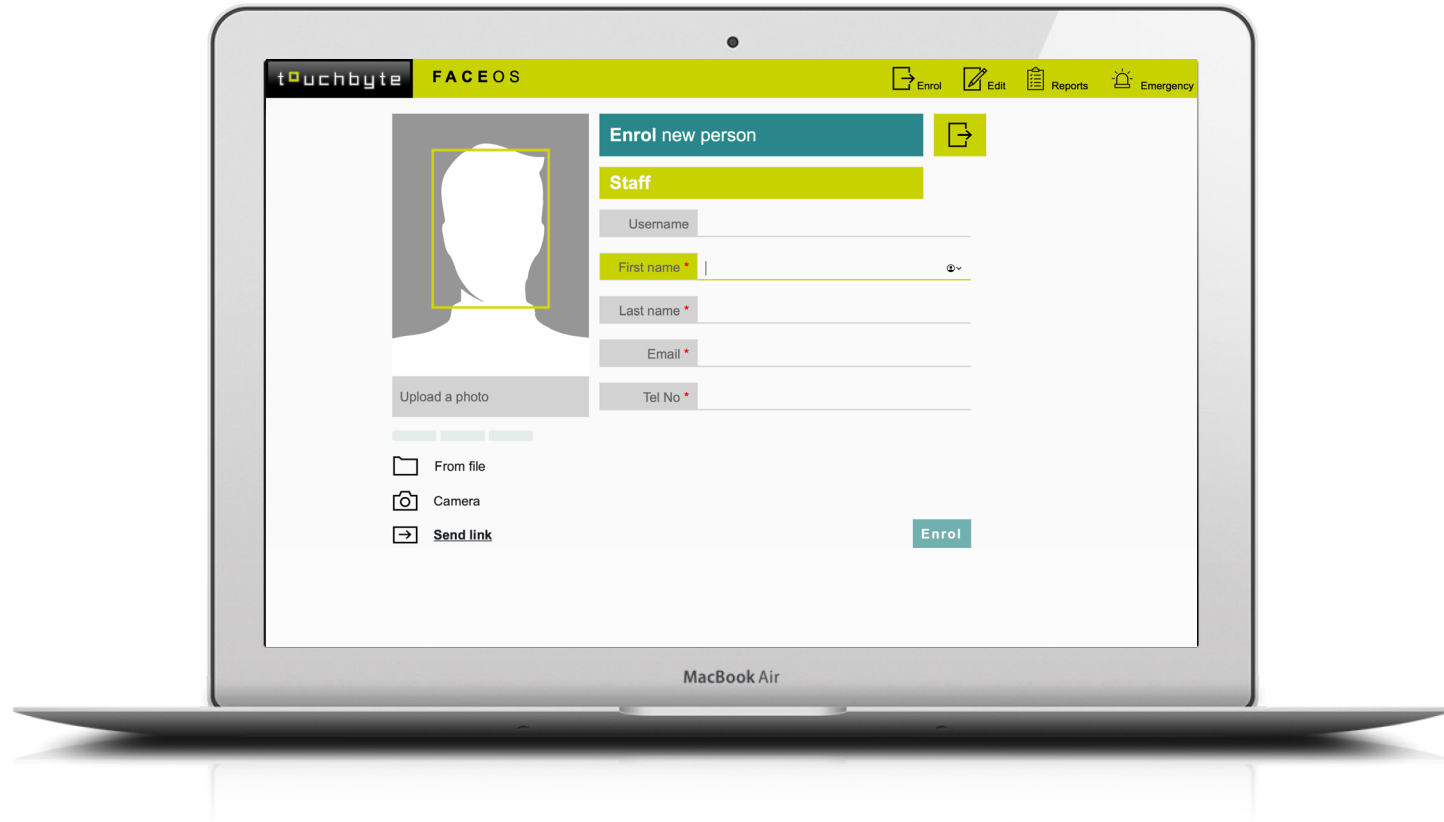

Allocate an area that users can access.

This allows for **contactless access**, within a scheduled time, to a specific area.

Here's an example. Staff can access all areas between the hours of nine and five. Guests can access a specific area between the hours of ten and two, or their hotel room for the duration of their stay. Manage this within FaceOS and **edit with the click of a button**.

**Reports** on who's where, and at what time, are all available within FaceOS. This data can be integrated into existing software solutions you use, from payroll, to time and attendance, to emergency technologies.

Instantly learn who's in the building via the **Emergency** tab. Use this list as a roll call or share directly with emergency services in the event of a fire or emergency situation.

# Why FaceOS?

**Simple:** It's a simple user interface with no fuss – we've only added what you'll use.

**Intuitive:** Not another stressful bit of software that takes years to learn. Enrol, edit and report.

**Secure:** A super-secure platform with rigorous data protection protocols.

**Safe:** Health and Safety conscious with a built-in emergency roll call feature. Quickly learn who's in the building, at the touch of a button.

**Centralised:** Everything you need in one space – not lots of different apps to update and log in to. Saves you and your staff time.

**Customisable:** Seamlessly send notifications of a VIP or particular visitor/guests' arrival directly to any device; from a phone to a tablet, to a smartwatch with NotifyMe.

**Contactless:** Enrol new users remotely without the need for in-person data collection, like fingerprints or iris scanning.

**Data Driven:** Gain valuable insights into who's where within your space, and how long they dwell for. Incorporate this into time and attendance or payroll, and you're good to go.

# GOT A QUESTION?

We'd love to chat about your business requirements, and ways in which we can cater to your needs.

Feel free to give us a ring, or drop us an email.
