A CONTACTLESS HEALTH INDUSTRY

The health industry suffered significantly during the **COVID19 pandemic**, with many carehomes and hospitals having to stop using contact-based access authentication such as **PIN key-codes** or **fingerprints**. **All of the existing access methods are flawed.**

PIN access provides little security as codes are rarely changed, and can easily be passed on to unauthorised persons. They are a **disease transmission point** and provide no record of who is present in a home.

Fingerprint access is **inconvenient** (as the biometric data must be collected in person) and is a disease transmission point.

Cards and fobs can be **lost, stolen or simply forgotten**. There can be availability issues and they are open to abuse. Discarded fobs and cards also represent an environmental problem.

At **TouchByte** we specialise in **contactless access control**. We developed **Facentry**, which overcomes all of these problems.

Facentry is **contactless, weather resistant, robust**, and can be used as more than just hands-free access control.

Let us explain a little more in this eBook. You'll be clued up on innovative, **contactless facial authentication** in no time.

HOW DOES OUR TECHNOLOGY WORK FOR YOUR BUSINESS?

Facentry works by recognising users who have been enrolled on the system. Users will upload a selfie, which is verified by our software. This is then used to grant access to a care home or hospital ward. It's as simple as that.

CONVENIENCE. Enable your staff to clock in quickly, saving them time and you money. Facilitate visitor access without the need for paper records.

SAFETY. It's contactless, eliminating a disease transmission point. A real-time record of who's present for emergency roll-calls.

SECURITY. Helps keep doorways secure, reducing risk to patients, residents and staff.

EFFICIENCY. Simple remote enrolment using a selfie, offering your staff and visitors easy access from day-one.

VISIBILITY. Reports from our **FaceOS Dashboard** allow you to track activity.

CONTROL. The quick, simple deletion of users prevents unauthorised access by former staff or visitors.

WHY FACENTRY?

SOLUTIONS. Our system can be tailored to your organisation's precise requirements.

PARTNERS. We can work with you and your site management team to provide all the support you need.

BRITISH. Facentry was designed and developed in the UK, and is built and supported here.

ETHICAL. We will always safeguard the data and security of your workforce, visitors, patients and residents.

FLEXIBLE. We have a variety of commercial models to suit your organisation and project needs.

RELIABLE. We aim to build long-term business relationships with our customers.

DESIGN

SIMPLE. The FaceOS Dashboard is simple and easy to use; making enrolment and management of users very straightforward.

BRANDABLE. The system is completely customisable with your corporate colours, brand and logo.

FLEXIBLE. Facentry can be integrated with all door lock types.

ADAPTABLE. The system can be integrated with your workforce management software for payroll, qualifications or HR.

DURABLE. The Facentry UCMcC has been specifically designed for indoor and outdoor use.

GOT A QUESTION?

We'd love to chat about your business requirements, and ways in which we can cater to your needs.

Feel free to give us a ring, or drop us an email.
